

波速 $v = \sqrt{\frac{B}{\rho}}$, $\Delta P = B \frac{\Delta V}{V}$, $\Delta P = \frac{\Delta F}{A}$, $\Delta V = A \cdot \Delta L$

$$\Rightarrow \Delta F = -\frac{BA}{L} \Delta L = -k \Delta L \Rightarrow B = \frac{kL}{A}$$

$$\left[\begin{array}{l} \rho = \frac{M}{AL} \\ B = \frac{kL}{A} \end{array} \Rightarrow v = \sqrt{\frac{k}{M}} L = f \lambda \Rightarrow \frac{L}{\lambda} = f \sqrt{\frac{M}{k}}$$

$$\frac{L}{\lambda} = f \sqrt{\frac{M}{k}} \Rightarrow k = \frac{f^2 \lambda^2 M}{L^2}$$

$$\Delta t = \frac{L}{v} = \frac{L}{\frac{L}{\sqrt{\frac{M}{k}}}} = \sqrt{\frac{M}{k}}$$

A. 測量A彈簧質量，架設鼓、滑輪和彈簧，測量波長計算 $\frac{L}{\lambda}$ ，每次增加彈簧的長度3cm做5次，用 $\frac{L}{\lambda}$ 、M和f算k

B. 虎克定律

直接把彈簧垂直懸吊，掛重物測伸量算k

C. 改用k小的彈簧B (a) 實驗A起始長度改為50cm

(b) 實驗A伸長度改為5cm

(c) 實驗B砝碼質量改變，作圖
